

Solid Surface Care and Maintenance

Using Solid Surfacing

General care in preserving the beauty and functionality of Solid Surfacing can be as simple as wiping regularly with a damp cloth.

To protect against stains, cuts and heat damage, pay careful attention to the information below.

Cleaning Stains

Because Solid Surfacing is non-porous, liquids and stains remain on the surface so they can be removed.

1. Using a damp cloth and warm soapy water, clean the top immediately all over.
2. Then wipe with a clean damp cloth to remove the soapy water.
3. Then dry with a clean, soft, dry cloth.

Using Solid Surface

Chemical Ingredient	Synonymous Names
Hydrochloric Acid	Muriatic Acid Hydrogen Chloride
Sulphuric Acid	Oleic Acid Oleum
Hydrofluoric Acid	Rust Remover
Phosphoric Acid	Rust Remover
Sodium Hydroxide	Caustic Soda Caustic
Pumice (abrasive)	

Heat

Never place hot objects or heat producing appliances directly onto Solid Surfacing.

Always use a heat shield, hot pad or trivet to avoid marking the surface.

Rinse off household chemicals immediately, clean surface with warm soapy water and wipe dry.

We only recommend that you use warm soapy water or a solution of mild, non abrasive detergent to clean your Solid Surface worktop.

If you are in any doubts as to how to care for your Solid Surface worktop, please contact your supplier.
