

Care & Maintenance Guide

Metalux Metal Washbasin

Important Information

- Read the instructions carefully.
- Check the product for any signs of damage and remove any protective film.
- It is recommended that a technically competent installer undertakes installation.

Routine cleaning with soap or mild detergent in warm water, followed by a rinse with clean water is adequate for normal soiling. The surface should be thoroughly dried with a lint free cloth to prevent watermarks.

Repeated applications and the occasional use of a nylon scouring pad will often remove heavier soiling.

To remove light scratches use fine Scotchbrite pads to clean the sink surface. Place the pad on the stainless steel surface and apply force by hand in a straight line motion moving from side to side (ensure the pad motion is in the same direction as the grain).

Under no circumstances should solvent cleaning agents, bleach or abrasive cleaning agents or cloths be used. Do not use hydrochloric acid for cleaning. This will lead to pitting and stress corrosion cracking. Use of any of these aspects will result in the guarantee been made void.
