

Bathroom Perfection

Please leave these care instructions with the end user.

Coralux solid surface basin

Thank you for purchasing a Utopia washbasin.

We always recommended that a technically competent installer undertakes installation. This basin is suitable for domestic use only. Please note that water temperature should not exceed 70°C.

This basin is not supplied with any tap holes. This is to allow you flexibility in the choice of basin mounted or wall mounted brassware, or with the number of tap holes required.

Any tap holes required in the basin must be cut out using a suitable sized hole saw or a router fitted with a suitable bit. Please check the requirements of your brassware before commencing cutting.

The basin should be cleaned using warm soapy water only, then buffed with a soft, dry cloth. We recommend using microfibre cloths for cleaning our products. Never use aggressive chemical cleaners, bleach or solvents to clean the surface of the basin. If you live in a hard water area, lime salts in water can build up. Regular cleaning will minimise this effect. Limescale can be removed using a 50/50 solution of water and white vinegar.

Care and maintenance for Matt basins

Matt basins are as follows:

- Fabricated inset white bowl
- Symmetry undermount bowl
- Halo matt basins
- Lustre matt basins
- Geo Integra basins

Hair dyes, bleach, nail polish, make-up etc. can stain the surface of the basin. Remove any spillages as soon as possible, using warm soapy water and a soft cloth. If the basin becomes stained, discolouration can be removed by using a very mild abrasive cleaner, such as Cif cream cleaner. For heavily stained basins, a Scotch Brite 7447 pad can be used sparingly to remove localised discolouration. Take care when using a Scotch Brite pad, as this can remove the Utopia logo from the basin.

Care and maintenance for Gloss basins

Gloss basins are as follows:

- All-in-one Coralux washbasin work surface
- Halo gloss basins
- Lustre gloss basins
- You Mineralcast basins

Never use any abrasive cleaners. If a cleaning product feels gritty when rubbed between your fingers, then it should not be used on the basin. Small scratches can be removed by using a mild polish, such as Brasso. Deeper scratches on the surface can be removed with very fine abrasive paper soaked in water. Start with 1500 grit paper, followed by 3000 grit paper. After any scratches are removed, the surface of the basin should be polished with a mild polish.
